

VOLUNTEER TODAY!

Help Families Breathe Easier! Become a Master Home Educator.

The **Healthy Sustainable Homes** program seeks enthusiastic volunteers to conduct free, in-home air quality assessments to help residents of Fort Collins learn about the health risks posed by common home pollutants and ways to “green” their homes.

Volunteers will participate in 20 hours of training with experts in specific areas of indoor air pollution, which has been found to be up to 70% worse than outdoor air pollution! Upon the successful completion of the training, volunteers are awarded a Master Home Educator certification and asked to contribute 20 hours conducting in-home assessments and community programs.
