

Tuckahoe Turf Farm obligations for the Homefield Advantage:

Tuckahoe Turf Farms will temporarily remove existing sprinkler heads, strip old turfgrass from the football field, and fine grade if necessary. Tuckahoe Turf Farms will then install new turfgrass playing field, approximately 60,000 square feet, making sure all seams are tight and the football surface is complete. The original sprinkler heads will be reinstalled.

Tuckahoe Turf Farms will give grounds keeper or person in charge of maintaining the new turf some direction on maintaining the turf. They will also help with setting the timing of sprinkler system, but will not be responsible for the overall performance of the sprinkler system. Installation of, repairs or replacement of Sprinkler System *is not* the Responsibility of Tuckahoe Turf Farms and Tuckahoe Turf Farms *highly recommends* that an adequate system be installed and tested before installation of new turf grass.

Tuckahoe Turf Farms is also not responsible for the maintenance of the turfgrass after installation, but will gladly provide a maintenance plan and tips to keep your Homefield Advantage field looking good.
